Imposter Syndrome 101

What if, I'm not good enough? What if, I try it and fail? What if, I speak up and say something dumb? Surely, I'm out of my league here.

Sound familiar? That annoying inner-voice is more common than you may think.

Here's Imposter Syndrome 101...

1/ First, what is it?

Imposter syndrome is a psychological phenomenon in which a person doubts their skills, talents, or accomplishments and has a persistent fear of being exposed as a fraud.

Essentially, you attribute your success to dumb luck and/or believe it is undeserved.

2/ A pair of psychologists, Suzanna Imes & Pauline Clance, first noted this phenomenon in the 1970's while observing 178 high-achieving women.

Inexplicably, the women had convinced themselves they were not that smart, instead they had simply fooled anyone who thought otherwise.

3/ Initially, Imes & Clance believed this 'imposter' feeling was exclusive to women.

They theorized that since women were (wrongly) stereotyped as less capable at the time, these high-achievers rationalized their accolades by concluding it was all fake or perceived.

Clance, P. R., & Imes, S. A. (1978). The imposter phenomenon in high achieving women: Dynamics and therapeutic intervention. *Psychotherapy: Theory, Research & Practice, 15*(3), 241–247.

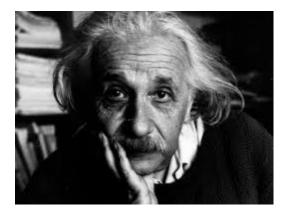

4/ In the time since researchers have established imposter syndrome can affect us all.

And, as many as 7 out of 10 of us have our own internal struggles with this self-defeating belief system.

As it turns out, high performers by their very nature are prone to imposter feelings.

5/ Even the guy who gave us e=mc^2, it seems, was at odds with this conflict of reality.

As Einstein confided to Queen Elisabeth, "the exaggerated esteem in which my life work is held makes me very ill at ease. I feel compelled to think of myself as an involuntary swindler."

6/ But that's just Einstein being, well, Einstein - right?!

Perhaps, but as <u>@tomhanks</u> put it, "no matter what we've done, there comes a point where you think, 'How did I get here? When are they going to discover that I am, in fact, a fraud and take everything away from me?"

7/ As you might imagine, many who experience impostorism keep it to themselves—falsely believing they are alone in these feelings.

The result; anxiety, depression, low self-confidence, and rumination with the inability to meet ever-increasing standards of achievement.

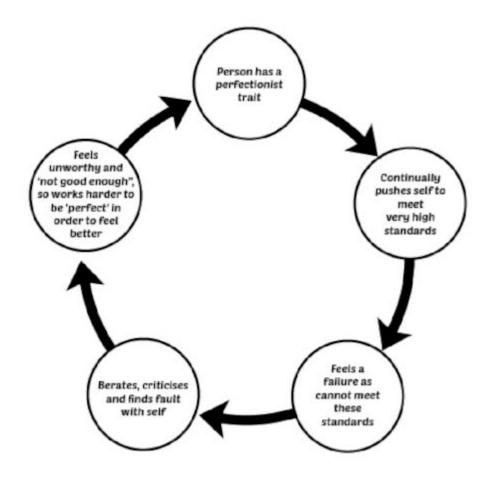

8/ While a little self-doubt, humility, and a pesky internal voice that is never satisfied is likely necessary for high performers; too much can be debilitating.

Let's look at some examples of how to spot impostorism in ourselves (and others), & what we can do to overcome it...

9/ The Perfectionist.

This person tends to micromanage and fails to delegate effectively due to the impossibly high standard of achieving perfection. As a result, less gets done.

Remember, "done is better than perfect." Whatever it is you want to accomplish, just start!

10/ The Superhero.

This person tends to be a workaholic, largely as a cover for their insecurities. Craving external validation, they also take constructive criticism personal.

■ Practice breath as an anchor to the present. Power poses & positive self-talk to build confidence.

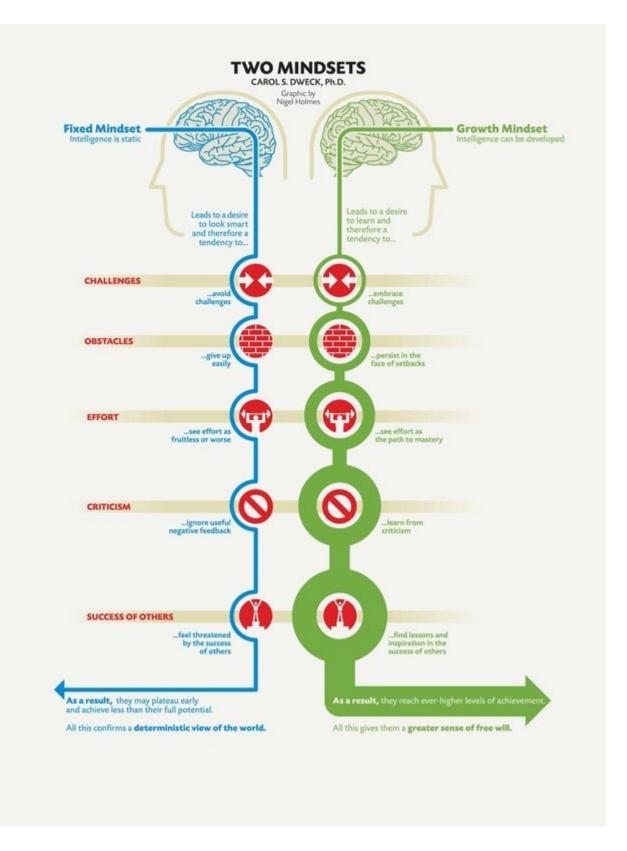

11/ The Natural Genius.

This person tends to be fixed-minded, judging their competence (and thus worth) by the speed & ease of their work.

■ Language —> "yet" can give a powerful framework to embrace the process of adding a new skill.

e.g. "I'm not good at that, 'yet'."

12/ The Soloist.

This person tends to take on everything by themselves. Asking for help, in their mind, would reveal them as a fraud.

■ Get comfortable with not knowing. Refrain from apologizing for simply asking a question. And, take solace knowing even Einstein needed help. <u>https://t.co/J6R4dhBwM1</u>

11/ Get comfortable with, "I don't know."

Most people have an inherent discomfort with saying, "I don't know."

Change that. Embrace what you don't know.

The world would be a much better, more efficient place if we stripped out the fluff and cut to the "I don't know" chase.

13/ The Expert.

This person tends to measure their competence based on what—and how much—they know or can do. They fear being exposed for not knowing enough.

Form a tribe of "experts" in related specialties to complement your skill set. Pay it forward by mentoring others.

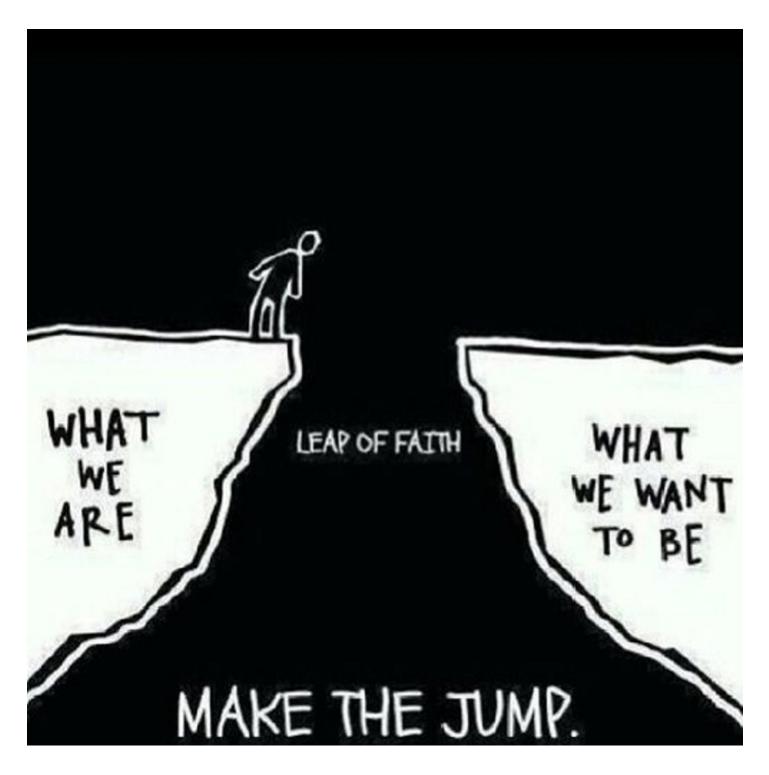

14/ Sharing from my own personal tug-of-war with impostorism (The Perfectionist) - the power to overcome these self-limiting beliefs begins in 3 steps:

- 1. Awareness
- 2. Belonging I'm not alone
- 3. Validation Others I admire have, themselves, felt like a fraud

15/ I hope this helps inspire confidence to believe in-and bet on-yourself, even as it can feel lonely at times.

Take that risk.

And, as Marcus Aurelius reminds us, embrace "the tranquility that comes when you stop caring what *they* say. Or think, or do. Only what you do."

Setbacks & failure trigger self-destructive tendencies in the best of us.

These emotional reactions, hardwired out of our basic need for safety, can feel uncontrollable.

Luckily, a fish called Nemo can help us conquer this primal instinct.
