To people who are under the impression that you can get rich quickly by working on an app, here are the stats for https://t.co/az8F12pf02

■ ~12000 vistis
■■ 109 transactions
■ 353€ profit (285 after tax)

I have spent 1.5 months on this app. You can make more $ in 2 days.

■■■■

I'm still happy that I launched a paid app bcs it involved extra work:

- backend for processing payments (+ permissions, webhooks, etc)
- integration with payment processor
- UI for license activation in Electron
- machine activation limit
- autoupdates
- mailgun emails

etc.

These things seemed super scary at first. I always thought it was way too much work and something would break. But I'm glad I persisted. So far the only problem I have is that mailgun is not delivering the license keys to certain domains like https://t.co/6Bqn0FUYXo etc. ■

omg I just realized that me . com is an Apple domain, of course something wouldn't work with these dicks
