Sharing, what I think, are some useful layouts for @tradingview

Market Analysis: I use this as a short-term breadth indicator. Clean chart with % Stocks Above Below MAs Indicator below. Indicator can be moved to any MA and also between SPX, QQQ etc.

https://t.co/sDMNov2U60

$SPX Stocks above 20,50 & 200 MA
https://t.co/K8G9KzyizA

New Highs vs Lows: New Highs vs Lows in the Market. If you compare the new lows emerging with major tops in the market you can see warning signs emerge. https://t.co/25n3nBPBSB

$QQQ Stocks above 20, 50 & 200 MA https://t.co/0geRTmSXn1

Finally, here is my standard trading layout h/t to @taplot as I shamelessly emulated his layout and use many of the scripts that he generously released.
https://t.co/EzHDmvaztS

If you find these helpful then give them a like and a retweet. Thanks. All are freely available indicators on @tradingview platform.
