### What are NFTs? ■

Learn 'everything' about them!

### Le Thread ■■■

NFT is short for Non-Fungible Tokens

They may look like pictures, but there's a lot under the hood.

NFTs are:

- one-of-a-kind
- rare
- are non-fungible
- can be sold

Any digital item can be an NFT - audio, photo, video, etc

■ Artworks are the most popular kind of NFTs

Non-fungible ■

NFTs are termed non-fungible because they can't be traded for other NFTs

They're one-of-a-kind and each NFT holds a specific value.

An NFT can't be exchanged for another NFT cos NFTs have different values unlike money where 1\$ is worth 1\$, and 2\$ worth 2\$...

Under the hood ■■■■■

NFTs may look like images you can just 'copy-and-paste', but they have unique metadata attached to them which looks like this ■■

The images we see are just a representation of this metadata. So technically, this is all an NFT is ■■■■

```
{
  "image": "https://gateway.pinata.cloud/ipfs/Qmb86L8mUphwJGzLPwXNTRiK1S4scBdj9cc2Sev3s8uLiB/0.png",
  "tokenId": 0,
  "name": "NFT_CREATOR 0",
  "attributes": [
    {
      "trait_type": "Face",
      "value": "White"
    },
    {
      "trait_type": "Eyes",
      "value": "regular"
    },
    {
      "trait_type": "Ears",
      "value": "ears1"
    },
    {
      "trait_type": "Hair",
      "value": "hair7"
    },
    {
      "trait_type": "Nose",
      "value": "n2"
    },
    {
      "trait_type": "Mouth",
      "value": "m4"
    }
  ]
}
```

So why are NFTs 'Expensive'■■■

- they can be traded easily through NFT marketplaces
- they allow buyers to own the original item, acting as a collector's item
- they are rare, unique, and scarce since only one original version exists, thus, making them expensive

Popular NFT marketplaces

- Opensea [@opensea](#)
- Rarible [@rarible](#)
- Axie Infinity [@AxieInfinity](#)
- Super rare [@SuperRare](#)
- Decentraland [@decentraland](#)
- CryptoKitties

What makes NFTs 'Valuable'?■■■

- Owning a kind of NFT can represent your engagement with a particular group
- They can act as tokens to exclusive & premium content of the group it acts in

- They represent complete ownership of the item

You can own an NFT by:

- creating one
- buying from an NFT marketplace
- being gifted one

The only networks today that support NFTs are the Ethereum and Solana blockchain networks

## ■ Minting

Minting is how a digital item becomes part of the blockchain. Similar to how money is printed and put in circulation.

It can be done by linking your wallet to a crypto marketplace to get an NFT after minting ■■

An NFT is minted once its created

## Difference between Minting and Buying an NFT■■■

When you mint an NFT, you will be creating an entirely new item onto the blockchain

But when you buy an NFT, it'll require that a pre-existing item has already been minted into an NFT before you can buy

## How to mint an NFT ■■

- create an account on MetaMask, @coinbase, etc
- Load your wallet with crypto
- Then go to an NFT marketplace like <https://t.co/4yAUXemBNY>
- start minting ■

## How to create an NFT■

- Identify the digital item
- install Metamask
- choose a marketplace (eg <https://t.co/4yAUXemBNY>)
- Sell & Mint your NFT from the marketplace
