In a bear mkt increase the tf to 6m / 1y, u will become bullish. Short and medium term bearish moves are actually long term pullbacks. Since 1990, there were only 9 bearish years out of 32.

.....

.....6m chart - history says -30% to -65% bear moves. 30% drop leads to 12.5k. Time to do pyramid averaging SIPs every month.
