Fantastic learning - Applying the below mentioned thing to Index too

This knowledge can change your PnL by huge as you know when to enter big & when to be careful & start booking profit

If we see last 4 bull run all went on avg 14 month after the Breakout (1/2)

A backtesting of trends on monthly says - Good trends last 10-12 months on average after that they retest 20 EMA on monthly and sets up larger base

You can use this to measure trends.. 3 examples for reference

- 1) FSI
- 2) Deepak Nitrite

3) Balaji amines

4) Indiamart

Don't know how many will get this as this is advance thing to get..Knowing this sets you objective before hand. Example if you are already in 11 th month of bull run you know you have to trail the trend a bit tight & if month 3 you know loads of money are waiting

Amazing
