As promised, here is a thread on how I use [@unusual_whales](#) to help me find actionable plays.

Please note that these are TOOLS, they are not a magic perfect tool for you to get rich quick. There will be winners, there will be losers.

[@snorlax_support](#)

1. The Live Flow

I use this tool by far the most. Here is where I identify all of the big moving transactions happening in the market. I generally look for Strikes that are OTM and are weekly or bi-weekly expirations, this shows urgency.

Minimum Premium - For me, I set my minimum premium at \$200,000

Emoji's - All selected besides Bid Side, ETF, Monthly, and Leaps.

EXPIRY - Nearest 4-5 Dates

Ask Side - ON

Bid Side - OFF

Exclude Deep ITM - ON

Ticker(s) - ?

Q Filter Tickers

Time range - ?

Time Close

Volume Range - ?

0 to ∞

Open Interest Range - ?

0 to ∞

% Diff (use 0.2 for 20%)
Range - ?

0 to 1

Volume > OI

Exclude deep itm

I use this tool at night to prep for the following day. I scan through it watching for anything that pops out at me, when it does I immediately check that tickers flow (more on that next). If I see things jumping out at me that skews the stock bull/bear with strength, I chart.

2. Ticker Flow

I start by looking at the 1K, 5K, 15K, and 30K to get a good feel for the volume for each expiry and strike price. I then go to the history to look at the options breakdown for each day. I mainly focus on Call Prem %, anything over 65%

EX. \$MU

Ticker [^]	Open/Close	Call Vol [^]	Put Vol [^]	Call Vol % [^]	Call Prem % [^]	Bullish prem % [^]	P/C [^]	Date [^]
\$MU	\$72.79 / \$74.04 1.72%	267,477	66,043	80.20%	73.74%	48.52%	0.25	Wed Aug 25 2021
\$MU	\$72.14 / \$71.98 -0.22%	104,485	47,769	68.63%	65.92%	51.27%	0.46	Tue Aug 24 2021

3. Charting

This isn't a lesson on TA, but when I'm charting im looking for Supply/Demand zones, Trend lines, Candlestick patterns - various time frames, and support/resistance levels (Yes, these are different from Supply/Demand) that are confluent with what im seeing from flow

4. Social Media / News -

After all this is done I go through Social media (mainly twitter) as well as various news outlets looking for things that can give me any indication on whether the ticker i'm looking at is trending / has any reason to be moving quickly near term.

5. Thesis

Once all this is done, I take all the information i've gathered and put together a thesis for my trade. I plan it in great detail and I NEVER deviate from the plan (very important). This outlines areas to enter and exit as well as when to scale in / out.

I hope this helps everyone who was asking me to do this!

Big shout outs go to [@YourBoyMilt](#) [@SharkofTraders](#) [@Just2Traders](#) [@tradinggrounds](#) for being great resources in the UW community! If anyone needs further help / has questions my DM's are open. Happy Trading!
