Twitter Thread by Kapil Dhama

All Key points of free straddle webinar are summarized by <u>@Scaliuminvest</u> team. Points Covered

- 1. When to initiate straddle
- 2. How to decide initial SL
- 3. How to trail SL
- 4. How to do adjustments in trending market

Thanks to <u>@jitendrajain</u> <u>@yogeshnanda1</u> and <u>@yogeeswarpa</u>l for this.

Trading Straddles

When to initiate Straddles:

Do straddle only when you think market is sideways Avoid straddles in :

- 1. trending markets
- 2. before event
- 3. when volatility is rising

Step 1: How to identify non-trending markets?

- 1. RSI should be between 40 and 60 [on 5 min timeframe]
- 2. ADX and DMI are not trending
 - ALL 3 lines are merged [sideways and not trending]
 - ADX outside both DMI lines

[when gap increase between 2 DMI lines and ADX is between 2 DMI lines - possibility of trend]

Step 2: Finding Entry on Straddle chart

- 1. Straddle should be below Vwap Price
- 2. Straddle should be below 20 EMA [on 1 min chart]
- It should be making lower highs

Step 3: When not to sell?

- Avoid selling straddle in falling markets As in falling market IV rise rapidly
- In falling markets can make straddle near major support and shows signs of reversal - where we expect market to reverse

Initial Entry and Stop loss:

Entry : sell below swing low on straddle chart Initial stop loss : above previous swing high or Vwap [never keep sl > 10 -15 points]

Other ways to keep Stop loss:

- 1. Vwap as stop loss and trail with vwap
- 2. Stop loss on individual legs
- 3. Swing highs on option charts

Check swing high& low on index chart and whing high price of CE or PE at

that time

- and keeping these prices as stop loss
