**Trading is very simple if you cut down steps. Let me explain my trading style. Every month i have target of collect 1000 points in bank nifty with capital of 10L . So every week i should collect of 250 points . I will invest 50% in bank bees ETF and pledge that money.**

Now i have 50% cash and 50% Pledge money. So for ex i have invested bees when market at 39k. After i pledge i will sell 42000 above calls in weekly worth of 150 to 200 points. If market going up let say 39500 to 40000 will start sell 37k below puts to collect remaining 100 point

Case1:- If market going up will loose in calls so will put sl of tippel of premium which i sold in calls. If it hits will exit that calls and rolled up to 43000 above calls and will shift puts.

Case2:- If market going down will loose in puts but will wait till 38500 levels . Same way will put tippel sl for sold puts. If sl hits will exit and will sold 36k below puts and rolled down the calls.

Case3:- If market is doing time pass with range of 38500 to 40500 will get 250 points easily and will sell next week call options.

Trust me it is giving money to me since last 3 yrs . Test it for 2 or 3 months in live market and deploy.

Reinvest weekly returns in bank bees and repeat it for 5 Yrs by that time your bank bees worth will be more and you can get simple money by covered calls in Bank nifty.

Here you can see for EX:-

Now bank nifty spot at 39000 then i sold 2500 above points here i am collecting 230 points. Used capital is 8L. If bank nifty come to 4000 levels will sold 37k below puts other wise will rolldown these calls and end with 250 points for this week.

10L capital

500 points from both the sides so total 1000 points

1000\*25= Rs 25000/-

$1000/4 = 250$  points every week with 10L capital

focus on collect 200 points from Friday to Wednesday

50 points easily collect on Thursday .

so total 250 points target we can achieve easily.
