Why English as the Universal Language of Science Is a Problem for Research

Where do most of the researchers and inventors around the world appear today? What is their mother tongue?

1/8

The obstacle to many researches in our country is that many of the documents and research articles that they need to do research are available in English only 80-90%.

Can't anyone read and understand research articles so easily? Why is that?
2/8

Today most scientific papers are published in English. What is lost when other languages ■■leave?

Plagiarism in research articles Should not be. What is Plagiarism?
3/8

Plagiarism is the representation of another author's language, thoughts, ideas, or expressions as one's own original work.

In educational contexts, there are differing definitions of plagiarism depending on the institution.

5/8

The vast majority of scientific papers today are published in English.

What gets lost when other languages get left out?
6/8

We must also submit our research paper in English only.

What is the future of languages ■■other than English if the same situation persists?
7/8

Will we be forced into an environment where the developed countries of the world have to rely on new inventions, especially without any chance of developing any Indian language?

What is the solution to this?
