### Omega-3 Research (thread):

I've been discussing omega-3 fats on here more recently, so I wanted to put together a short collection of larger meta-studies on some of their various health benefits

I tried to pick a variety of studies, with as much data in each one as possible, I may add more over time

Omega-3 fats seem to have the most benefits when it comes to reducing chronic inflammation, many mental illnesses like depression, ADHD, and schizophrenia, promoting gut/microbiome health, and preventing neurodegenerative diseases like Alzheimers and dementia

Interestingly, evidence for improvement with cardiovascular disease is more variable than many other issues, though there are many promising studies

The majority of studies with omega-3 fats and cancer seem to generally show benefit, but this also varies in a few studies

Keep in mind that the majority of these studies are done with fish oils rather than whole seafood

Personally I believe that with this taken into account we will likely see much more benefit to health issues using whole seafood as it's PUFA are less likely to be oxidized
