Gold standard info if you can use

■■■■■■■■ ■■-■■■■■■ ■■■ ■■■ ■■■■■■■■

1) Screening using chart Ink -

Create a screener to find EMAs confluence 20-50-100-200 on weekly time frame.

Here is the screener created just now -<https://t.co/uHjTy9Ujuv>

2) Now do manual screening by sorting from high volume and find the stocks that have corrected well on chart -

Look at Mirza International -

- Base formed after correction
- EMAs confluence
- Pump to 3.5x in less than a year
- Enter when candle closes above EMAs confluence

3) Last Step is to do some Fundamental Screening -

- Debt is manageable
- Cash flow not reducing
- Operations expanding ?
- Read more what's in pipeline
- Compare with peers and check if its undervalued
- Check the forecasts of that sector

Enter if passes in above
