@StocksNerd

Instead of Simple Moving Averages, I use Weighted Moving Averages. I use the following signals to identify Stage 2-

1) 50 WMA > 100 WMA > 150 WMA > 200 WMA

2) Price is within 25% range of its 52-Week High and above 30% or more from its 52-Week Low.

Just one question , how do u differentiate stage 2 from 1 , apart from volume , what else do u look ?
