A day trading setup CLUE for trading index / stocks for a living..Capturing a big move in adv.

If cpr is bearish,n price opens abv cpr with a 5-15 min bullish pa or price crosses abv cpr within first 30 min, it usually signals a big move ahead.

Vice versa for bull cpr.

Bullish cpr is shaded blue; Bearish cpr is shaded red. If u think that higher value cpr are necessarily bullish and vice versa , then ur Wrong … I will leave this concept for discussion.
