Aditya Todmal

The best traders have a trading plan.

But 98.8% of the new traders, don't know how to make one.

### I analyzed <u>@niki\_poojary's</u> account, to learn how we can create a plan on our own.

## Here's the simple 8-step process:■

Step 1: Multi-time frame analysis

This is done to:

- Find the structure (HH-HL means bullish, LH-LL means bearish)
- Align trades with the trend on the longer timeframe
- Find important Support/Resistance levels
- Trendlines

She does this to find the direction and levels.

Step 2: Identify Patterns

There are two kinds of patterns:

- 1. Patterns on the chart. (Eg, symmetrical)
- 2. Candlestick patterns. (Eg, Bearish Engulfing)

She keeps a track of all these patterns and updates them on <u>@niki\_poojary</u> daily.

Trades all these patterns without fail.

#### Step 3: Option Chain analysis

In isolation, OI data won't work. It depends on the way you analyze it.

If you have a bullish view look for high Change in OI added on the put side. Vice versa for a bearish view.

This is just a confirming tool for the view that you've taken.

Simply knowing the direction doesn't mean that you'll make money.

After these, we need to figure out which options we will sell by managing our risk.

This depends on:

- 1. Individual's Risk-taking capacity
- 2. Conviction
- 3. Desired Return
- 4. A lot of practice

Step 4: Calculate what premiums of options you need to sell to make your desired return

If you are looking at a yearly target of 40% ROI, you need to make 0.75% every week.

For that, you only need to sell a 20rs option.

Check the strategy attached below as an example.

Options		▼ 17FEB2022		- 42	2000		▼ CE	*
Select Segment		Select Expiry		Sel	ect Option Strike		Select Option T	ype
🖲 Buy 🔘 Sell	Lot Qty.	- 1 +		Option Price: 4.	25 Option IV: 32.74		ADD POSI	TION
	Add Strategies:	STRADDLE	STRANGLE	SPREAD	IRON FLY	IRON CONDOR	JADE LIZARD	
				Option Chain				~
NOTES								SAVE STRATEGY
Strategy Positions		RESET	PAYOFF CI	HART	FUTURES CHAR	NKNIFTY	GREEKS	E P&L
x 17FEB2022 40000CE - ₹ 21.45 (0)		2 🔵 🖬	10,000		-20 -10	38517.25	+10	+20
17FEB2022 42000CE -₹4.25 (0)		🖻 🔵 ti	0					
rob. of Profit		91.56%	-10,000 -					<u></u>
ax. Profit		₹ +430 (0.77%)	<b>so</b> -20,000 -					Y
ax. Loss		₹ -49,570 (-88.40%)	-30,000 -					···
ax. RR Ratio		1:0.01	-40,000 -					and the second
eakevens		0-40017.0	-50,000 -					
otal PNL		₹0	-30,000 -					

#### Step 5: Far away distance from the spot level.

You DO NOT need to trade in high premium strikes to make money.

I have seen many traders unnecessarily trade high premiums while not getting high ROI's.

Having a far-away distance gets you a very high probability to win.

Step 6: Position sizing

You should learn to deploy money in 10 lakh terms.

What I would recommend to new traders who are trying this method would be to deploy 2 lots per 10 lakh and trade initially.

After some success can scale up to 4/6/8 lots per 10 lakhs.

Step 7: Risk Management

An effective way to manage risk is to put a stop loss on your capital for the day. For eg, 1% loss on capital, divided into 4 trades.

In my experience, you should start by risking 0.25% per trade only until you get some profit money to increase the risk

Step 8: Money Management

If you're doing well and making money, it makes no sense to risk less when you can have the same views/logic and make more money.

Whenever capital is at an ATH, can start increasing the risk per trade.

When in a drawdown of 5% or more, lower the risk.

Step 9: Bonus Tip for newbies

I have seen people lose huge money on such days:

- Event days
- RBI policy days
- Result days

Also, monthly expiries really give violent moves. She plays safely in the last week of every month.

Doing this ensures lower drawdowns as we risk lesser

Still not clear?

If you need some help I compiled a thread on <u>@niki\_poojary</u> weekly analysis.

You'll get to see 13 examples of Weekly Bank Nifty analysis curated together chronologically.

Go through this and compare it with your trades.
