## Twitter Thread by **DTBhat**

How I trade intra-day? I have a couple of scanners which is run on a selected stocks from F&O universe. I run 4 scanners (2 each for bearish and bullish).

<u>#WatchList</u> for tomorrow - in case Nifty is bullish, I will be interested in the following stocks for long trades. They are relatively stronger in Nifty50 Index <u>pic.twitter.com/9ZKIJWJaBE</u>

One set is for breakout trades and another for pullback trades. On a bullish day I trade on the longer side and on a bearish day I trade on shorter side (normally). For breakout trades - I check

- \* Multicolumn BO
- \* Bullish Broadening
- \* 100% pole
- \* Turtle BO

For Pullback trades - I check

- \* 123 Pullback
- \* Oops support and resistance
- \* Weak Breakout (ziddi bulls)
- \* Strike Back pattern

Additionally I check for oversold PMOX indicator for pullback trades

Similar scanners for bearish trades also
