How to analyse n interpret Put Call ratio (PCR)perfectly explained by @saketh1998 in his open interest (OI) series on YouTube.. This might give you slight edge to find direction in intraday trades of index.. My summary..Thanks @optionables n @sujith_nadig https://t.co/Kfi91GWR8i

Open Interest: Analysis - (one of the factor of Market movement)

PCR Interpretation :— High call OI ⇒ Bearish

High put OI ⇒ Bullish

if

→ PCR is betⁿ 0.9 — 1.1 ⇒ Consolidation.

→ PCR is betⁿ 0.5 - 0.9 ⇒ Bearish sentiment.

→ PCR is betⁿ 1.1 - 2 ⇒ Bullish sentiment.

→ PCR is below betⁿ 0.5 — 0 ⇒ Reversal may happen (you expect up more)

→ PCR is above 2 ⇒ Reversal may happen (you expect down more)
