## How to find Relative Strength with Moving Averages

A thread■■■■■

Like and Retweet

Stocks showing Relative Strength their

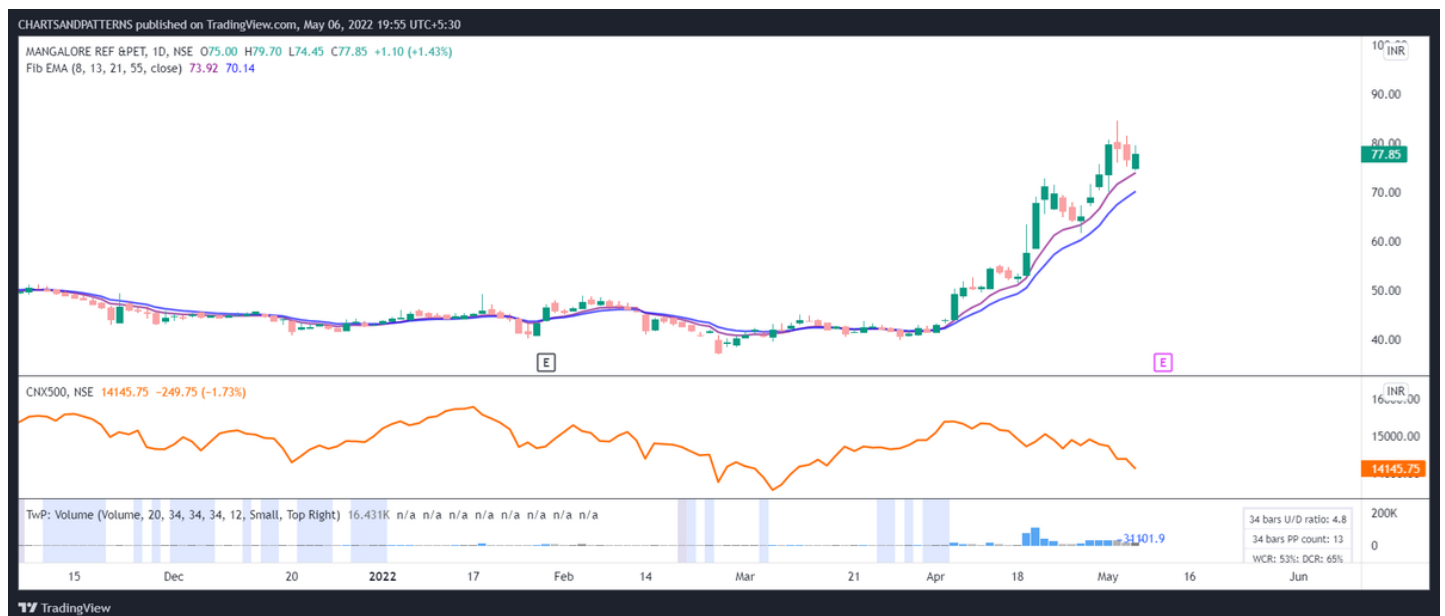

Shorter Period Moving Averages(say8,13)

would be either distancing away or Smallest period(8) MA line would be above or

converging towards a Smaller period(13) line but would be above it.

Example: See how they fared with CNX 500 #MRPL

#GSS(both running away defying market fall) while #Ghcl #Welcorp (resisting fall with market shown by converging ma but 8 ma line over 13 ma)

Compare it with stocks showing weakness

#Supriya #Intellect

Greater the difference b/w Moving Averages greater the Strength  
A scanner to find stocks with help of MAs showing Relative Strength  
<https://t.co/Dt6n7iX3PT>

Adjust the settings in the below scanner with 1.02/1.03 to find stocks in Higher Momentum
