Kicking off the Year in Review for #PICUQI and #PedsICU #MedEd #CCC50 Search strategy included a review of ALL tables of contents of major pediatric and critical care journals, PUBMED search, key collaborative search, asking on @twitter and discussion with experts in the fields.

First up, discussion of #PICUQI #CCC50.

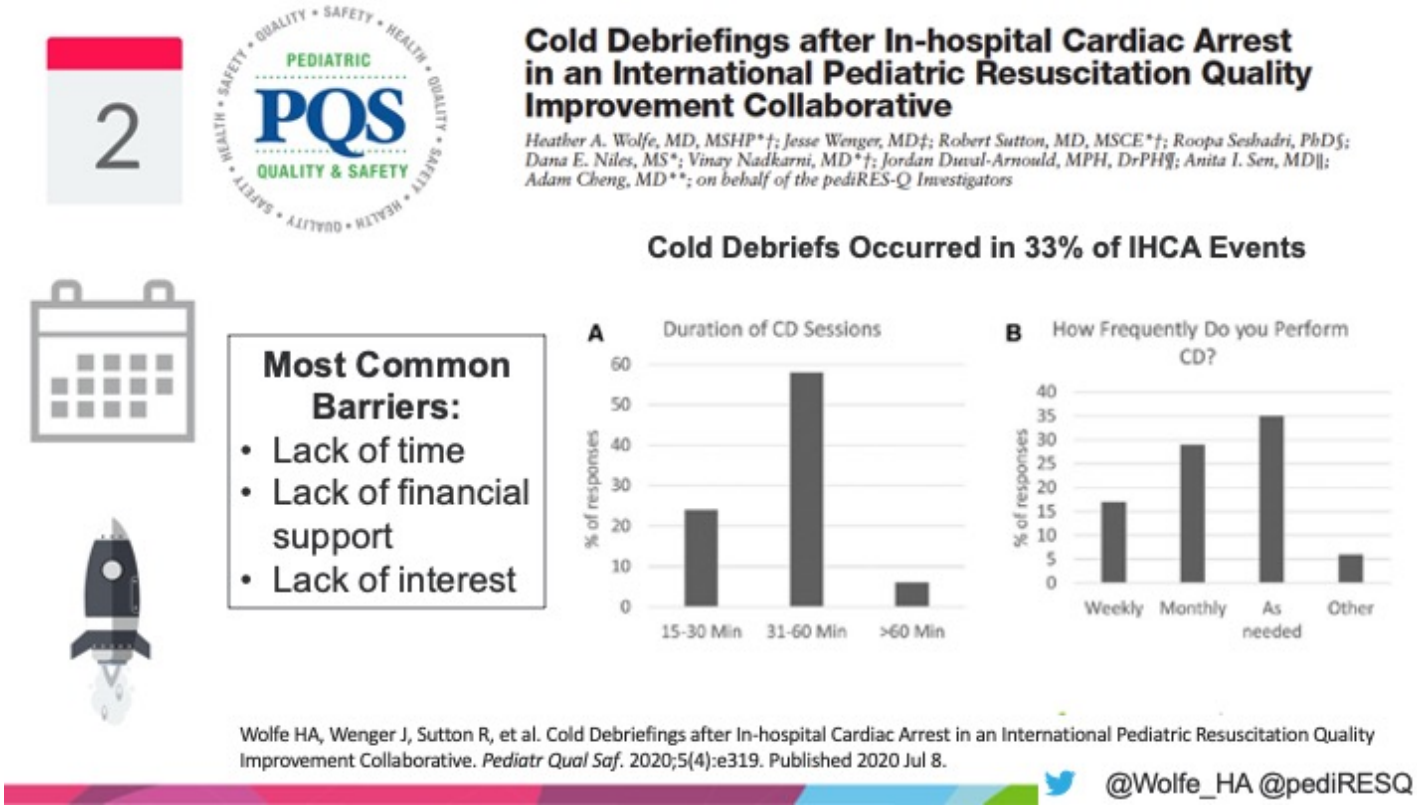

First up by @ndean75, “The Late Rescue Collaborative: Reducing non-ICU arrests” in @PedCritCareMed Dean & colleagues saw decreased rates of non-ICU arrests & increased participation through @AAP #MOCPart4. #PICUQI #CCC50

Editorial by @pccm_doc: https://t.co/1B8E1iXUxP

@wolfe_HA @pediRESQ in @PQS_LWW used a plus/delta approach to assess cold debriefs and found commonly reported barriers to be lack of time, financial support, or interest. Do you do cardiac arrest debriefs at your center? What are your barriers? #PICUQI #CCC50

@mgaies @pc4quality in @PedCritCareMed found the incidence of thrombosis 2%, CLABSI was 1%. Significant risk factors for thrombosis and infection were younger age, greater surgical complexity, and total catheter days. #PICUQI #CCC50 https://t.co/Ht8ADvO8VD
