Infrastructure review #rc3

There were only 18 heralds for all the talks. It was really hard to pull off, this conference also started a news show. #rc3

Next is the heaven team. 1487 total angels volunteered of which 710 arrived. 76 weeks worth of work hours were done by the angels. They prepared a few goodies for the RC3 world. Badges were given to show angels. Tried to keep traditions from the conference on RC3 world. #rc3

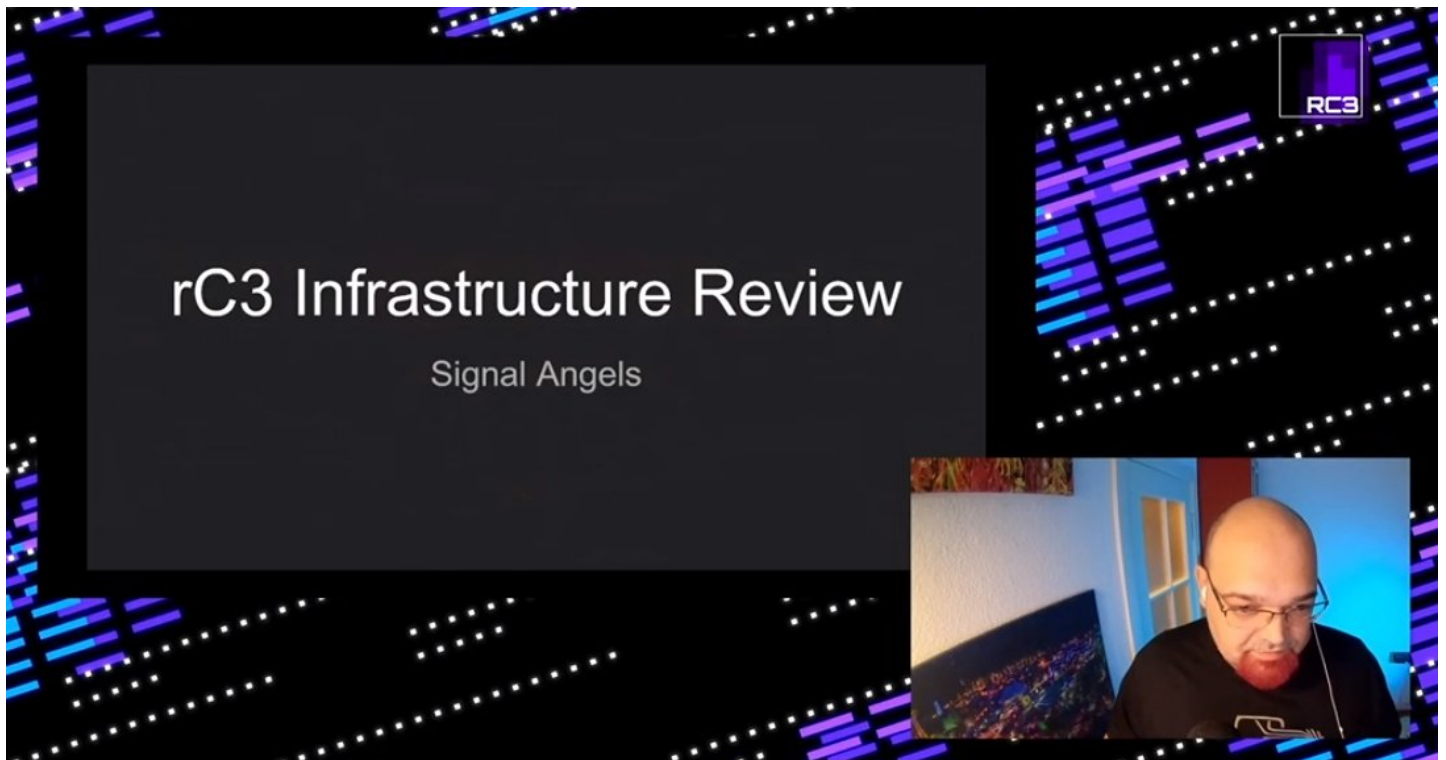

Huge thanks to all the angels who volunteered. This conference would not be possible with the help of everyone. #rc3

Our annual working statistics

- Last query: 2020-12-30 13:37 UTC+1
- Angel statistics
 - 1487 total, 710 arrived, 298 with shifts
 - Recorded work done: 17,75 weeks
- Badge achievements
 - Badge "Found Expired Extinguisher" 232
 - Badge "Extinguish Fire In Heaven" 125

Next team is the signal angels, this is the first time that people had to do remote Q&A. The procedure was quite different to the in person event. There were 157 shifts filled by 61 angels. There were 5 unfilled shifts. #rc3

rC3 Infrastructure Review

Signal Angels

A few things went wrong, some questions were long and need to split apart. Formatted questions were also a challenge. There were on average of 9.94 questions per talk. #rc3

"Statistics"

- Used a Python script to download all pad content
- Read pad content and count lines
- Remove size of static header from line count

- $n_pads=179, n_lines_without_header=1780$
⇒ 9.94 "Questions"/Talk

The slide is part of a presentation with a dark background and a purple and blue geometric pattern. A video feed in the bottom right shows a man with a beard and headphones in a room with shelves. An RC3 logo is in the top right corner.

The next team is the line producers which handles the communication between everyone that handles the production of the talk. This includes the people behind the cameras, technical side and the speakers themselves. #rc3

Line Producers Aufnahmeleitung

The slide features a circular graphic with the letters 'A', 'U', 'F', 'N', 'A', 'H', 'M', 'E', 'L', 'E', 'I', 'T', 'U', 'N', 'G' arranged around the central text. The background is dark with a purple and blue geometric pattern. A video feed in the bottom right shows a man with headphones and a black t-shirt with an RC3 logo. An RC3 logo is also in the top right corner.

There were 25 studios (pre-recording and live). 19 live broadcast channels including main streams and assemblies. Over 350 talks and performances. Events in main channels produced by a studio. #rc3

Production Setup

- 25 studios (pre-recording and live)
- 19 live broadcast channels
 - Talks: rc1&rc2, Bitwäscherei (CH), c-base, Chaosstudio Hamburg, ChaosTrawler, ChaosZonne TV, Chaos-West TV, franconian.net, about:future, KreaturWorks, oio, R3S, Restrealität, WikipakaWG, xHain
 - Lounge & Ambient
 - Sendezentrum
 - re-runs of the best talks from previous years
 - Infobeamer
- Over 350 talks and performances overall
- Events in main channels each produced by a studio

There were 53 talks for the main channels. 18 of them were pre-recorded, 3 live in a studio session 32 live via the internet. The team prepared 63 speakers and they coordinated production between the master control room and 12 live studios. #rc3

Facts and Figures

- 53 talks in the main channels
 - 18 pre-recorded
 - 3 live in a studio location
 - 32 live via the Internet
 - Heralds mostly remote, but some local in the studio
- Prepared 63 speakers (thank you Home Setup angels!)
- Coordinated production between Master Control Room and 12 live studios

2020 was the year of remote talks, there were 2 prior events to learn from. 2 new CDNs were added which brings the total to 7 CDNs with a total bandwidth of ~80GB. Added 2 transcoder machines. Various spaces were able to enhance their setups with public funding. #rc3

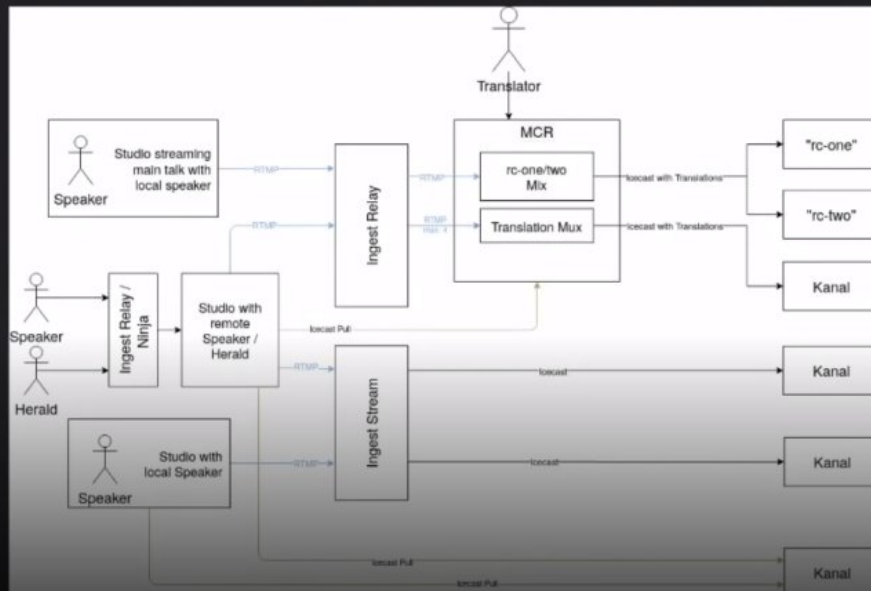

2020 - Year of distributed conferences?

- We had two DiVOcs and the FrOSCon to learn about producing remote talks
- We learned a lot of stuff on organisation, how to record BBB and Jitsi...
- There have been various other events for streaming ... but this was business as usual
- We extended the streaming CDN with two new location (7 in total) with ~80Gb
- We added two media.ccc.de mirrors (4 ccc, 7 others) and started to distribute the frontend
- Two new transcoder machines
- Erfas / Spaces enhanced their setups with public funding
- 10 Erfas / Spaces with own productions on media \o/
- But one Question Remains: Will it scale?

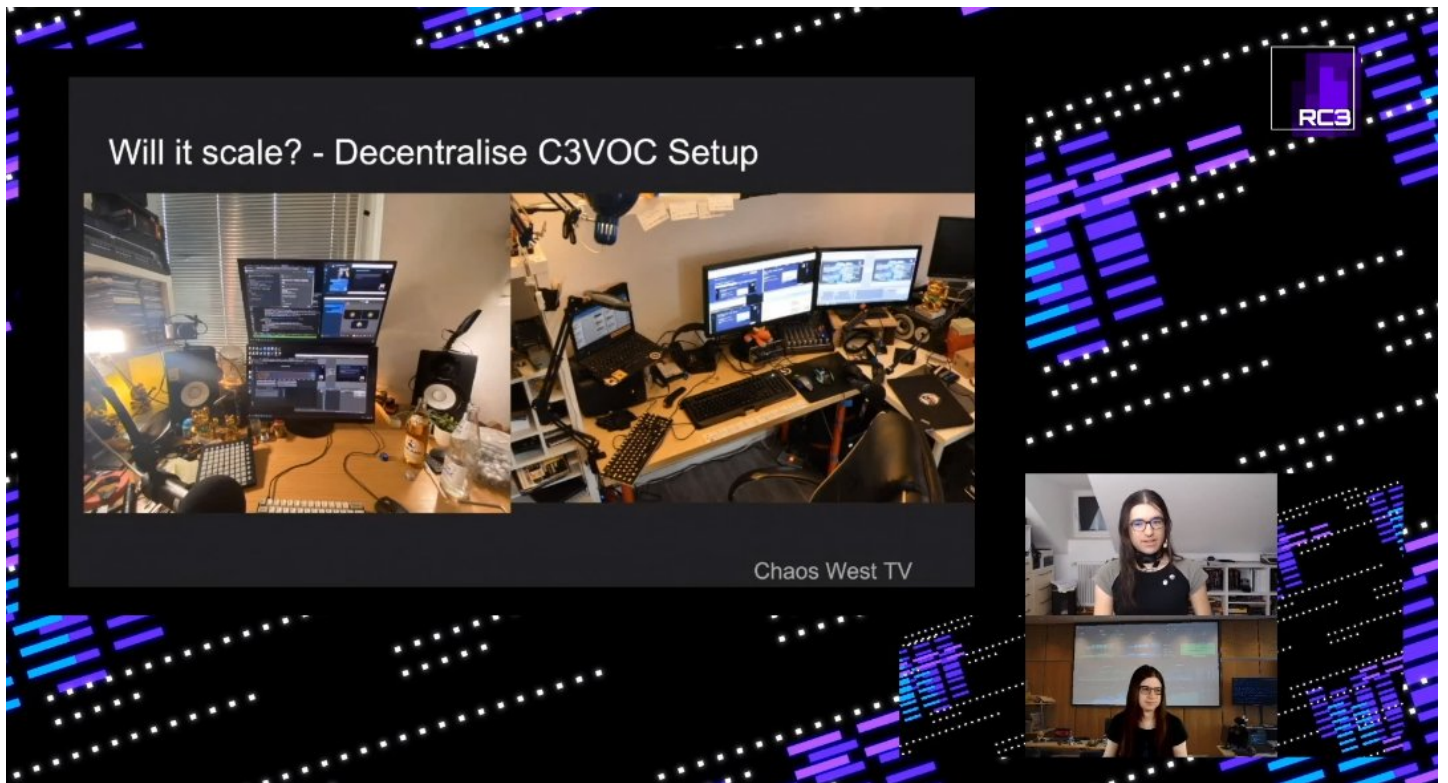

Below is the diagrams of the various input and processing channels. The various communication paths caused a number of issues due to the complexity. #rc3

Will it scale? - Decentralise C3VOC Setup

Some of the remote setups that were used as part of the broadcast for the various streams. #rc3

Some more remote setups that were used as part of the broadcast for the various streams. #rc3

Then the issues started rolling in. A lot of both hardware and software investigations had to be done. There were many malformed packets that causes issues. #rc3

... and then there was some minor issue

- Suddenly a lot of connections - "maybe we should look at our cache"
- Then A lot of more connections - "the people are watching our streams"
- Moments later - "well something did not scale well. There is an issue"

Next up is the c3 Lingo team. 36 volunteers translated 138 events which resulted 106 hours of translated video. 5 talks were translated to French, 3 talks were translated to Portuguese. There were quite a number of issues with audio and timing between multiple translators. #rc3

What we done

- ▶ speech recognition generates transcript
- ▶ angels correct transcript
- ▶ auto-timing aligns transcript with audio
- ▶ angels review subtitles for quality
- ▶ subtitle is released

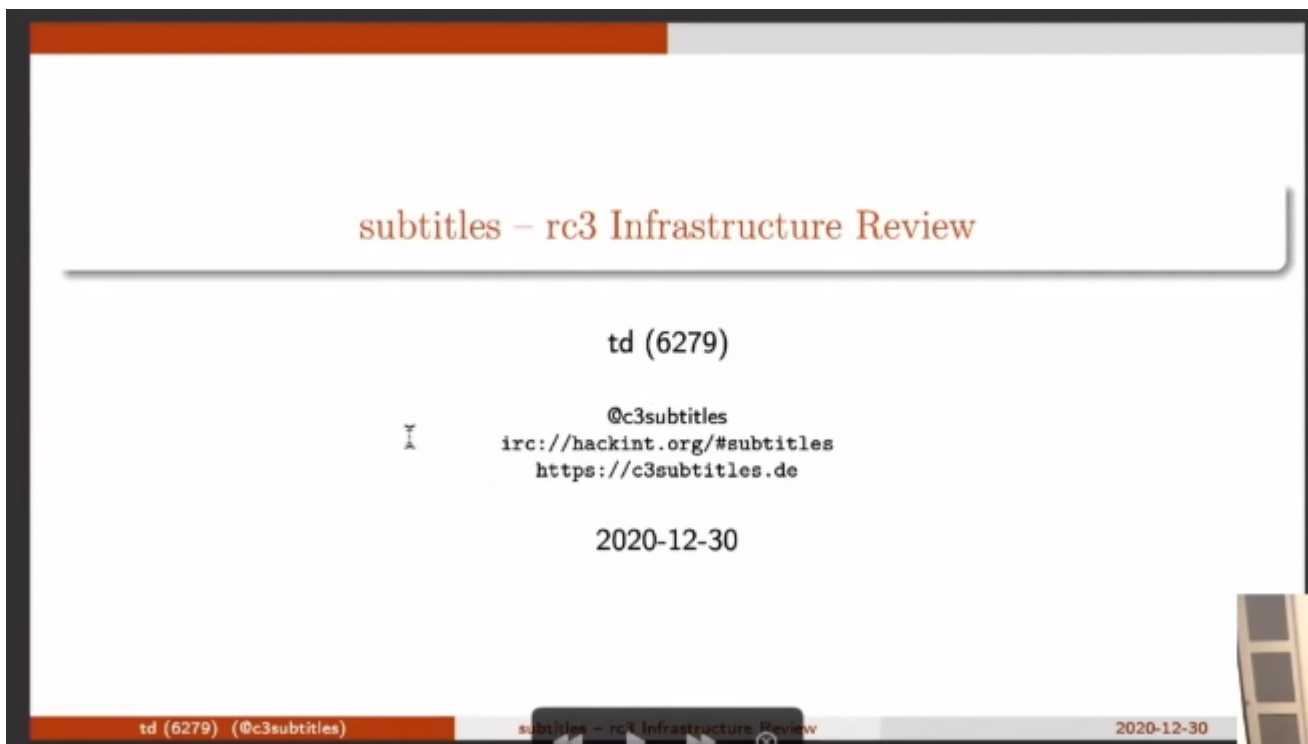

td (6279) (@c3subtitles)

subtitles - rc3 Infrastructure Review

2020-12-30

The next team is the subtitles team. The team uses speech recognition software to get a raw version of the subtitles after which angels correct mistakes and do quality control. 68 angels worked 4 shifts on average. They worked 382 hours for 147 hours of content. #rc3

Next is the Phone Operation Center (POC). 1195 SIP extensions, There were 21K calls (in the previous conference, it was 300K calls). Eventphone setup a Decentralized DECT infrastructure (EPDDI) and there were a number of phones that were used. #rc3

The RC3 world contained a phone that you could virtually use to call a SIP number. Someone made a flamethrower that could be controlled by a DECT Handset - C3 Fire. The team also made pictures available over SSTV on DECT, where you could get an image from an audio waveform. #rc3

Misc

1. Public Phone
2. 3473 - Flamethrower

Next is GSM team that had a setup across Germany, Berlin and one in Mexico. #rc3

GSM

Next is the Haecksen team which used over 7 million pixels to display the world with hundreds of git commits. 132 people received badges for testing the virtual swimming pool. They had 133 people with zero lag. Over 50 goodie bags with masks and microcontrollers were made. #rc3

The ChaosPat team set up a number of mentor and mentee sessions in the virtual RC3 world. #rc3

Next is the adventure world team that built the RC3 world. Work started in November, There were several upstream merge issues. Some of the issues with instance jumps were fixed on day 2. Over 400 commits for the initial world deployment. #rc3

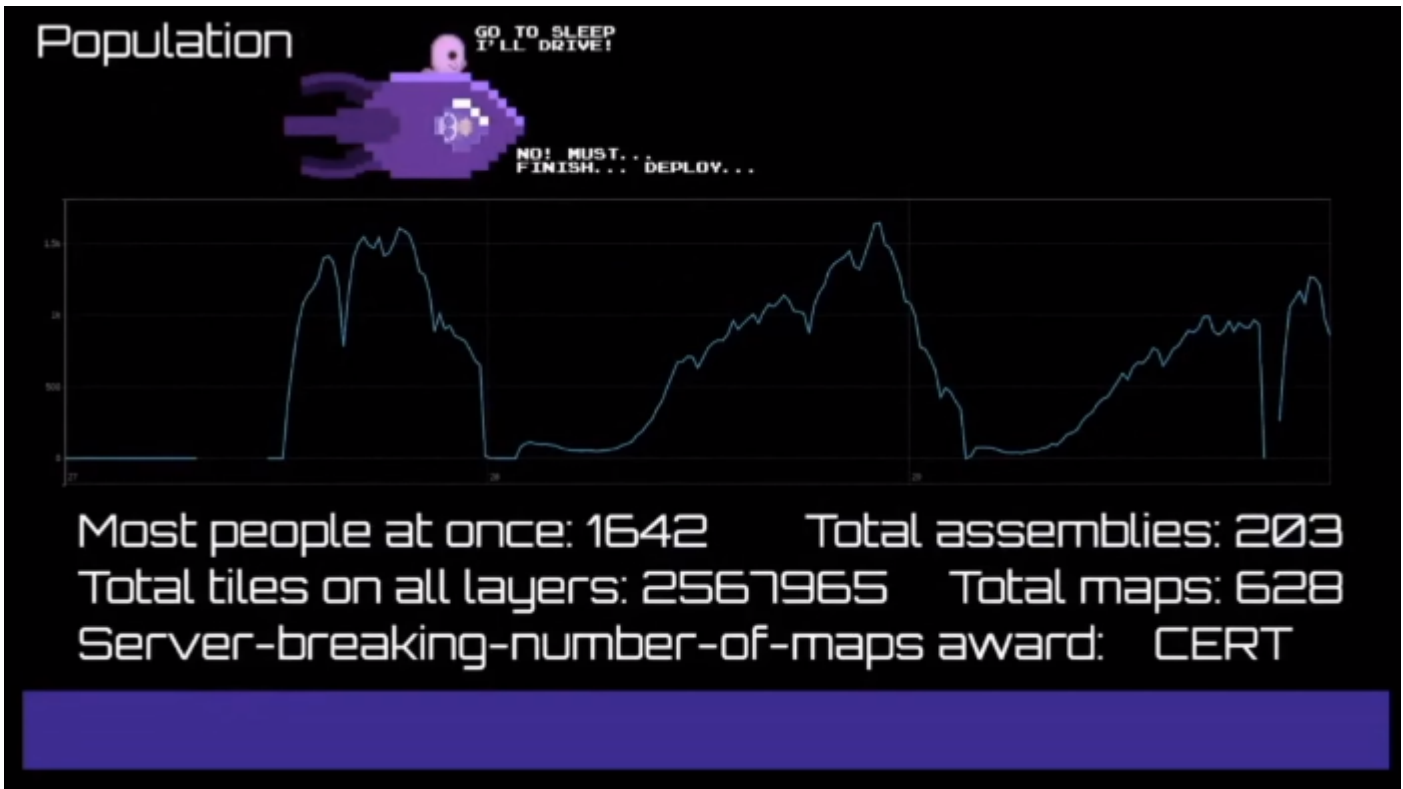

A faulted loop caused a lot of logs to be generated. This was fixed on day -5. On day -1, the deployer was finally working. A bug in the application causes people to not see each other. #rc3

Preparations: deployment

- NOV 22: First commit to the deployer
- DEC 08: First working instance
- DAY -5: Deployer still fork bombs itself after 5 minutes
- DAY -4: Somebody finally noticed
- DAY -1, ~3AM: Deployer is finally working
- DAY 1, 9:45: First login to production
- DAY 1, 13:00: First deployment
- DAY 1, 16:00: Wait, why is everybody on one instance?

A pixel art illustration at the bottom of the slide. On the left is a large, purple, alien-like creature with a white, pixelated eye. In the center is a small yellow robot with a speech bubble that says "ENOTIME". To the right of the robot is a pink skull with a speech bubble that says "WANT HELP?". The background of the slide is black, and the text is in a light blue, monospace-style font.
