4. Set a Benchmark Date from where you want the performance to be calculated. Since we have selected same % scale, as our chart moves the % on right will change. It considers the date on left as the starting point. Mark it & Scroll such that that vertical line is just about seen.

Save this as your Indicator Template & come back to it whenever you want to track indices from one page in real time & any time frame!

Feel free to experiment with Types of Charts. I feel Line Charts work the best. Benchmark Index can be an Area Chart :)
