A simple illustration to analyse stocks in a very simple way:

- 1) Prepare a list of stocks with more than say, 400% returns last 1 year and currently above 3 digits. U will have around 30-40 NSE listed stocks.**
- 2) Look at each stock chart just before breakout**

.....

....

- 3) Take a note book and right down against each stock, the behaviour of MAs Vis a vis the stock, for eg., 30 week MA / daily 200 ma / 150 ma, 50 ma, etc.); the behaviour of Relative Strength (RS); behaviour in terms of volume; any pattern like rectangular breakout etc.

...

....

- 4) Might take 3 plus hours for the above exercise. Once you are done, see the common elements against all stocks. That is the edge you have knowing the behaviour of super performance stocks. U need not hold for 400%. U can atleast get 20% out of it.

....

...

- 5) A eg. is -- few of the stocks had 3 year rectangular breakouts with RS at new high / 52w high. This is just an example. Dont immediately look for only this criteria. I can help you out with a list of triple digit stocks in excess of 400% over last 1 year.

GoodLuck.
