Syngene - Same concept. Price contraction. Shift from weak to strong hands through repeated volatility contractions. I can well write one whole page explanation on it. Look at the volume pump today. A big hand will never let you ride with him. Make sure you are there at the party <u>https://t.co/RN8sQYzdBg</u>

Borosil Renewables - Patterns like these must be looked at carefully and must be kept on the radar. Herein price is contracting which generally signifies shifting of hands (from weak to strong). If you go wrong, the risk is limited in these. pic.twitter.com/igyoeslZjy
