Value creation model
Best explained by #Syngene
-Assets
-Services
-Value created
-Reinvestment.

Syngene's moat and business are
Irreplaceable by any company in India
(Jubilant Biosys is only comparison but much smaller)

Value creation model

Assets
We have solid foundations based on our laboratory infrastructure, technology investments, skilled workforce, strong leadership, and financial strength. These assets underpin our ability to deliver great science for our clients.

Services
We deploy our asset base to offer integrated services across scientific discovery, development and manufacturing tailored to the requirements of every project.

Value created
We create value for our clients by delivering innovation while providing them both time and cost-to-market benefits. Our business activities also enable us to create value for our employees, shareholders and the community at large.

Reinvestment
We will continue to invest in additional capacity and new technology to ensure that we keep pace as science evolves.
