Twitter Thread by Aakash Gangwar

Reasons-

- 1. Long term channel top.
- 2. Curvature shift of 20 and 50 WMA along with price hitting 20 WMA frequently.
- 3. Overall weakness in IT sector.
- 4. For reference, study reliance top in August 2020, study Nasdaq Weekly chart and the top made in Nov 2021.

#tataelxi https://t.co/RmJa5LrdAP

I have traded the current fav Tata Elxi from 2200 to 4500. No regret on missing out rest of the move because I am not an investor. Now there are many technical red flags. I might be trolled but 10.5k looks max target while 5k or 3-4 years of sideways looks inevitable. #tataelxi
