## 3 Ways to ride a stock

(a thread)

>Do retweet if it adds value as this took a long time for me to make

### 1) 10/20 Day EMA -

Enter the stock as it comes up back to the 10/20 day EMA and ride it till it drops below or SL hits as explained below

Eg -Nitin Spinners as below

2) Weekly Super trend (Setting 2,7): Whenever trend changes , volatility increases & supertrend measures volatility..That's the logic behind it

Eg - Deepak Nitrite

3) 10 Week MA : Trend following can be done using 10 w MA

Eg - Saregama

Fundamental analysis has to be done for best results as these are to be applied on a growing co + sector movt together ..Eg If you will apply to random co with low RS or low growth..This might be very choppy

Do retweet if make sense so as I can make more of such thread
