"90% of the traders lose money, But do they lose it all the time?"

Most of them do make money, its just that they give it all back.

Lets analyze why and how a trader makes and loses money

[Thread]:

Below is the equity curve which is most traders dream.

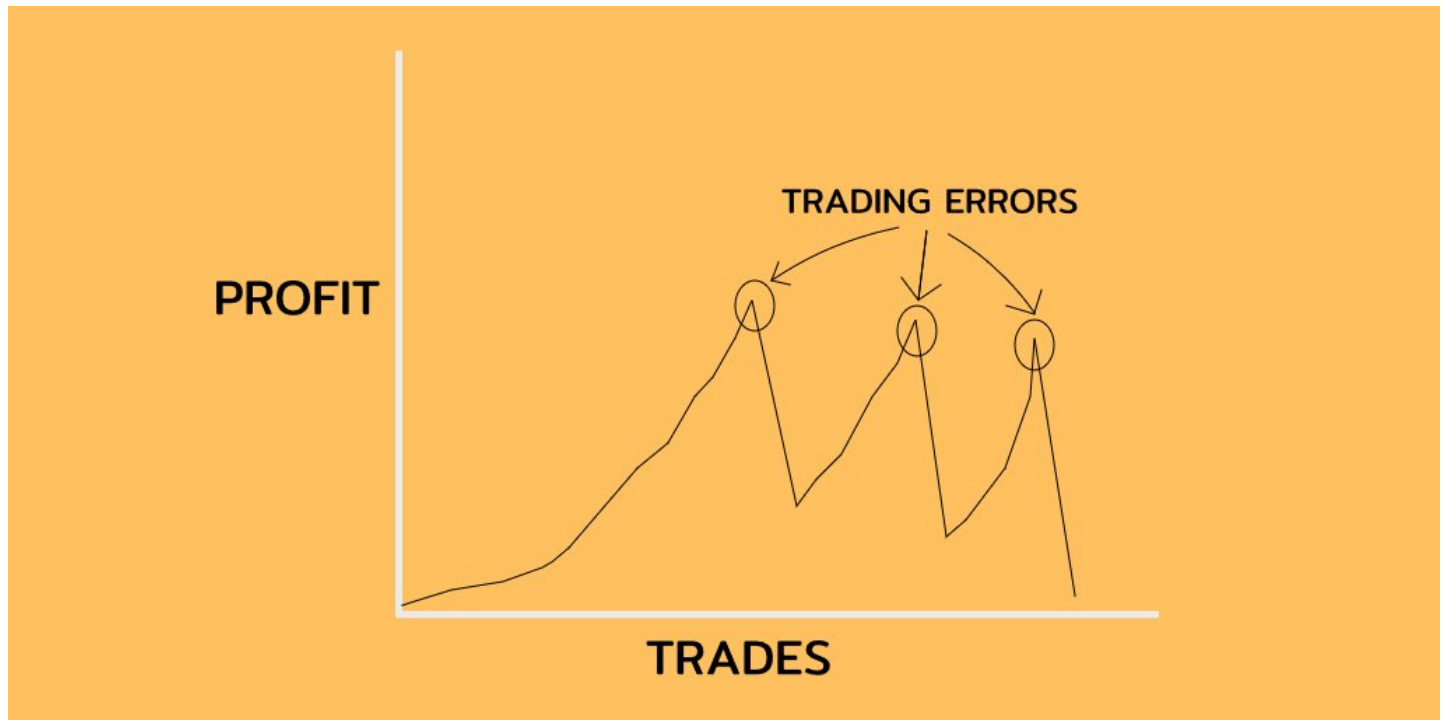

This is equity curve of an average trader:

Most traders do make money, but they give it back to the markets .

Because of trading errors.

What are trading errors?

Trading errors are those errors which happen because of wrong Position sizing, Leverage , etc.

I am not making this up, check your P&L, 90 % of your losses would have come from less then 10% trades.

Most of these happen because of No knowledge, No plan, bad position sizing .

Now, we know what's the problem, lets talk about the solution.

1. Learn the Basics first-

If you don't get the basics clear then how can you make money?

Learn How to use Support and resistances

Learn How to use trend lines

Learn about trend, it will solve 90% of your problem

2. Plan-

The number 1 problem is that you don't have a plan,

And by plan I mean set of written rules.

If you don't have a plan then you really aren't serious enough to consider making any money.

So, Make a plan.

How does a plan looks like?

TRADING PLAN

1. What type of methodology will you use?

->Trend following, Mean-reversion, Non-directional, Breakout, e.t.c.

2. Which Time frame will you use?

-> Weekly, Daily, 1Hr,15min,5min etc.

3. Which Tools will you use?

-> Moving average, ATR, Volume, Trend lines, e.t.c.

4. What type of instruments you will use and How many?

-> Index, Nifty 50 stocks, All F&O stocks, Options, Futures ,Cash.

5. Define how you will take your entry?

-> At the breakout, Retest of breakout, Break of PDH,PDL e.t.c

6. Define how you will exit?

-> Day end exit, Time based exit, Trailing sl based exit, target based exits,Volatility based trailing method e.t.c.

7. How much capital you will use?

8. How much risk you will take per trade?

->1%, 2% e.t.c.

9. Maintain a trading journal and consistently review your trading performance.

3. Position sizing-

Money management is that part of your system that answers "How much?" throughout the course of the trade.

How much essentially means how big a position you should have at any given time throughout the course of a trade.

Attaching a thread on how position sizing affect the account-

<https://t.co/H9UBHy0CSt>

you can see that risking the appropriate amount of money is necessary for your equity curve growth.

There are two type of position sizing strategies,

1. Martingale

2. Anti-martingale

How position sizing can affect your trading performance-

Assuming that you are trading a Trend-following system with Big RR and low win-rate.

For example, assume that you risk one percent per trade on a 100,000 account and you have 20 straight losses.

— Trader knight (@Traderknight007) December 1, 2020

1. Martingale strategies increase the risk per trade when equity decrease.

2. Anti martingale strategies increase risk per trade when equity increases.

There are further many anti martingale strategies

I will be explaining this further in upcoming days as this thread will get super long if I do it now.

Tip-

When you start to trade ,trade small for the first 20-30 trade , at-least 1/3rd of the risk what you think you will trade.

This will give you confidence and you can follow the plan effectively when you do not have fear of losing.

4. Be ready for Black swan events.

What are black swan events?

Big gap-downs, Flash crash, Big news, Market or stock hitting Upper or lower circuit.

Think about can your account be wiped in these conditions?

If yes, then correct the parameter due to which you can have big draw-down.

4. Next is psychology, Read the book trading in the zone, that will cover all your psychology related problems.

Attaching some threads which can help you.

Thread on law of large numbers-

<https://t.co/Hg0BnWGYrV>

Tweets on psychology-

<https://t.co/1CJT0sZcUs>

<https://t.co/8rIYnkLKTa>

These are some of the things that can help you become a better trade.

Thank you for reading till here.

"Don't change the trading rules after every trade."

If you do change them frequently then this thread is for you.

Let's talk about the law of large numbers and how it benefits traders to be profitable.
