Thread: Free Options Trading Course for Beginners with small capital.

Reference: Option trading marathon series, part 1 from Mr. Subasish Pani ft. @PushkarRThakur

Collaborated with @AdityaTodmal

1/ Trading journey of Mr. Pani

- He has an experience of 7 years.
- He has made a profit of Rs. 20 cr. over these years with a capital of Rs. 2 cr.
- However, it's not easy to make such profits.
- More difficult, is to retain those profits and build more on it.

2/ How he ventured to options selling

- He started with futures and option buying however after a certain point when his capital grew, he faced scalability issues and hence he resorted to options selling.

3/ Investing becomes imp once the capital grows:

- Since his trading profits have grown well, he has started investing (investing is always for LT).
- For folks who dnt have much info regarding investing can simply buy Nifty 50 stocks & keep rebalancing as Nifty 50 does.

4/ Covered calls strategy for the portfolio:

- Pledge the portfolio and receive margin ~80% which he would then use to sell OTM CEs of the stocks which are in his portfolio.

- This helps in generating fixed income from the portfolio.

5/ For folks who wish to learn trading, check this:

- Need to have a firm commitment.
- In terms of money and in terms of how much time you would give yourself in market.

6/ Start with a small capital:

- Lets say you start with Rs. 10k.
- Buy everyday one single stock exit with Rs. 300 loss and profit of Rs. 600 with position sizing.
- Do this exercise for 30 days.
- This is to understand the process.

7/ Stick to your set up

- Be disciplined
- Don't do system hopping
- Try to take atleast 100 trades to understand the nuances of the system, as develop discipline over the period.

8/ What is Call option (CE) & Put Option (PE)

- If your view is that market will go up, an option buyer will buy a CE and if the view is that market will go downside then an option buyer will buy a PE.
- Every option has a premium.

9/ Intervals in NF & BNF:

- Nifty option strikes has an interval of 50 points and Banknifty has 100 points.
- Check Option chain for more details:
 - Nifty : <https://t.co/5BrThceFd3>
 - Banknifty: <https://t.co/HbPkJw310q>

10/ When does an option buyer or a seller makes money?

- Buyer makes money if the market moves in his favor.
- Option sellers make money if the market remains sideways or moves in his favour.

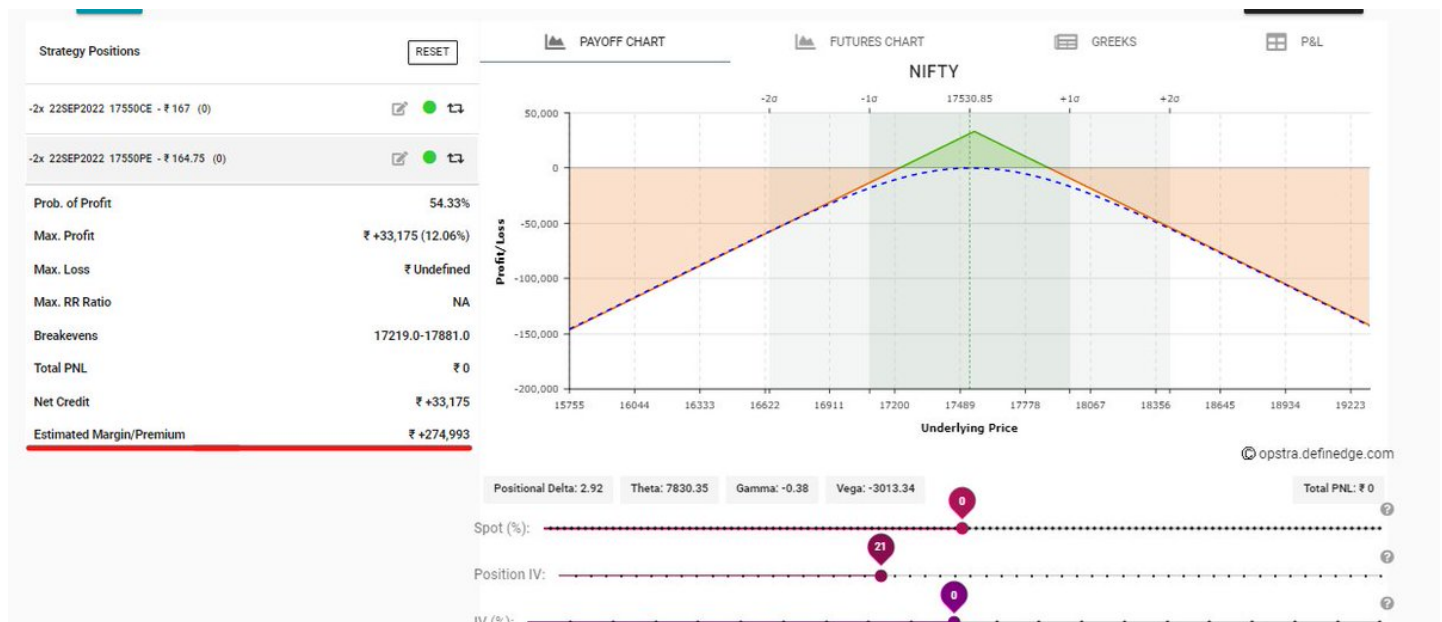

11/ Basic set up for option sellers: Short Straddle

- Wherever the spot is sell both CE & PE of the same strike.
- Currently NF spot is at 17530, so to short a straddle one has to sell both 17550 CE & PE together.

12/ How to initiate a trade:

- Net premium collected is Rs. ~330
- Premium decay happens the most on Tuesday Wednesday and Thursday
- Trade this in intraday and avoid overnight risk while learning.
- Probability of this set up is 70%
- The R/R should be 1:2

13/ When to exit:

- Capital required for 2 lot of strangle is approx. 3 lacs
- Book out based on target or SL:
 - SL: if the losses amount to Rs. 5,000 or
 - Target: if the strangle is in profit of Rs. 10,000.

14/ Don't go into adjustments:

- Especially when you are in learning phase.
- Also Subasish doesn't believe in adjusting the legs, its usually SL or target for him.

15/Don't get sad when you SL is taken out

- Take that as a learning, as you will exactly know how much point SL you need to keep.
- How does the option premium behaves towards the expiry etc.

16/ Option buying requires more discipline

- Although any trader requires discipline while entering and exiting trades however option buyers requires this virtue a lot more.
- An option buyer can make money only if he can time the momentum properly.

17/ Option buying Timing:

- Usually momentum is better from 9.15- 10.30am.
- 5min TF will have more trades than 15min.
- Select the TF as per your temperament.
- If one has slightly more capital then look for trades between 1.30-3.30pm.
- 10.30-12.30pm: No trading zone.

18/ Trading psychology & discipline in option buying:

- If you have booked losses in 3-4 trades in the morning hour then just close for the day.
- If you are in profit in the morning trade , then you can risk that profit and trade in the closing hour.

19/ When to buy?

- E.g. you are using 5min TF.
- If any candle breaks the first 5min high or low buy CE or PE accordingly.
- Eg: Market gives a BO of the first 5min candle basis which you buy a CE option, but thereafter before reaching your 1:2 target it makes a downmove.

20/ When to exit?

- Now exit the CE buy and buy a PE.
- If the market is in momentum then you'll be in profit.
- If your SL gets hit, then that's an indication that market is consolidating.
- If both the sides SL gets hits then better to close trading for the day.

21/ Best time for option buyers having small capital:

- Focus only on 9.15-10.30am everyday.
- Thursdays when there is weekly expiry focus on 1.30-3.30 pm as well, as a strong move towards the end of expiry can fetch handsome returns.

22/ Take inspiration rather than getting influenced:

- Performance comparison should be with oneself rather than comparing with profits of others on the SM.

We have an upcoming two day workshop on October 15th and 16th, 2022.

Venue: Andheri East.

Go through these links and sign up for the workshop.
