THREAD DOWN BELOW FOR TRADING

Within this thread I will go over educational content you can read and watch, chart patterns, best platforms to use and more

\$prog \$metx \$nept \$bxrx

Rules that i follow on a day to day basis

- 1) Make sure I have a plan when buying a stock
- 2) Move SL up as go along
- 3) Stay strict with my support and resistance levels
- 4) Scale as the stock price moves up

My favourite book to read

The exponential moving average (EMA) is a technical chart indicator that tracks the price of an investment (like a stock) over time. The EMA is a type of weighted moving average (WMA) that gives more weighting or importance to recent price data. <https://t.co/KH8LGUrRmO>

Moving average (MA) a used technical indicator that smooths out price trends by filtering out the “noise” from random short-term price fluctuations. When asset prices cross over their moving averages, it may generate a trading signal for technical traders. <https://t.co/99FpNPVwHo>

MUST READ

- This link includes all types of trading tools you can use to master trading <https://t.co/DrprMjrsVc>

Sec fillings

SEC Filings are regulatory documents that companies and issuers of securities must submit to the Securities and Exchange Commission (SEC) on a regular basis.

How to read these fillings <https://t.co/boTO4hFE0u>

SEC Filings you must know:

Form 3 - the initial filing, tells the ownership amounts.

Form 5 - is an annual summary of Form 4 and includes any information that should have been reported.

Form 4 - Consist change in the holdings of company insiders. Directors, officers, shareholders owning 10% or more of the company's stock.

Form 10Q - A quarterly Statement balance sheet.

Form 10K - A yearly statement balance sheet. A simple formula for basic calculation:
Assets-Liabilities=Equity

Form 8k - is a very broad form used by publically traded U.S. companies to notify investors of any material event that is important to shareholders. Companies have four business days to file a Form 8-K after a reportable event has occurred.

Form SC 13D/13G -13D is an SEC filing that must be submitted to the US Securities and Exchange Commission within 10 days by anyone who acquires beneficial ownership of more than 5% of any class of publicly traded securities in a public company.

Schedule 13G is an alternative SEC filing for the 13D which must be filed by anyone who acquires ownership in a public company of more than 5% of the outstanding stock. The 13G filing is considered a more passive version of the 13D and has fewer reporting requirements than the 13D.

Form S3 - Self Registration is a type of offering where certain issuers are allowed to offer and sell securities in public without prospectus. Basically securities under shelf can be sold anytime without notice. -- Dilution

How to buy the fush strategy

<https://t.co/l3izo65pVw>

Gravestone doji candle formation. This is a bearish reversal candle stick, this could help you with taking profits when needed or entering a short position.

Watch video in link for powerful doji candles

<https://t.co/XhLyjPnjr2>

A dragonfly doji is the opposite! This a bullish signal which indicates a reversal to the up trend. (Hammer candle) I use this quite a bit to indicate a reversal! Sellers drying and buyers entering!

Videos to watch on Support and Resistance

How to find plays

No two ways to go about it but twitter is now a great way to find top plays using other traders to your advantage is key such as [@MTradess](#) [@3_Green_Candles](#) [@jose_dehoyos18](#) [@bvllish_trader](#) [@Mini_Tradez](#) [@BoaTrading](#) [@ripster47](#) [@StockSwingAlert](#) [@barnimal](#)

...

- pre-market gainers, get up a few hours early and analyse the top gainers in pre market and draw up support and resistance. You can use Trading view in order to find top gainers or on webull.

- Screen time, previous days runner and hours of charting is how I find plays

What platform to use

In America as far as I'm aware WEBULL is the best platform to use <https://t.co/6CVjtMPRSQ>

In the UK IBKR, T212 and Tradezero are good to use.

Price target

Based on resistance. \$METX looking at the chart your next resistance point is 0.57, you scale some here 25% and raise SL up. Next resistance point is 0.63 then 0.7. Scale at these key areas. Having a \$5 PT isn't really going to get you far, keep scaling.

Level 2 time and sales by [@LunarAces](https://t.co/yDRdSjeenb) <https://t.co/yDRdSjeenb>
