@ThePupOfWallSt

I've been a @TrendSpider user for almost 2 years now. Time flies when you're having fun.

Here are my top features & tools from the platform I use every day when doing my technical analysis on charts.

■■■

1/ Alerts

This is the number one feature that is critical to my work. I can't watch every single chart on the screen at all times. When I find a trade I like, the first action that happens after charting is setting an entry alert. In addition, I set alerts at my targets as well.

2/ Dynamic Watchlists

This is my starting point for my weekend work. It helps me clarify what I will be watching in the coming days. The secret sauce is the dynamic lists you can generate off of scans.

Here's a video from the @TrendSpider University https://t.co/Du1bNn7T2I

3/ Scanning

Every trader has a method & part of my core process is scanning. @TrendSpider makes it easy with pre-built scans at your fingertips. They also allow you to build your own custom scans that you can then turn into a watchlist. POWERFUL.

https://t.co/9q191ujyce

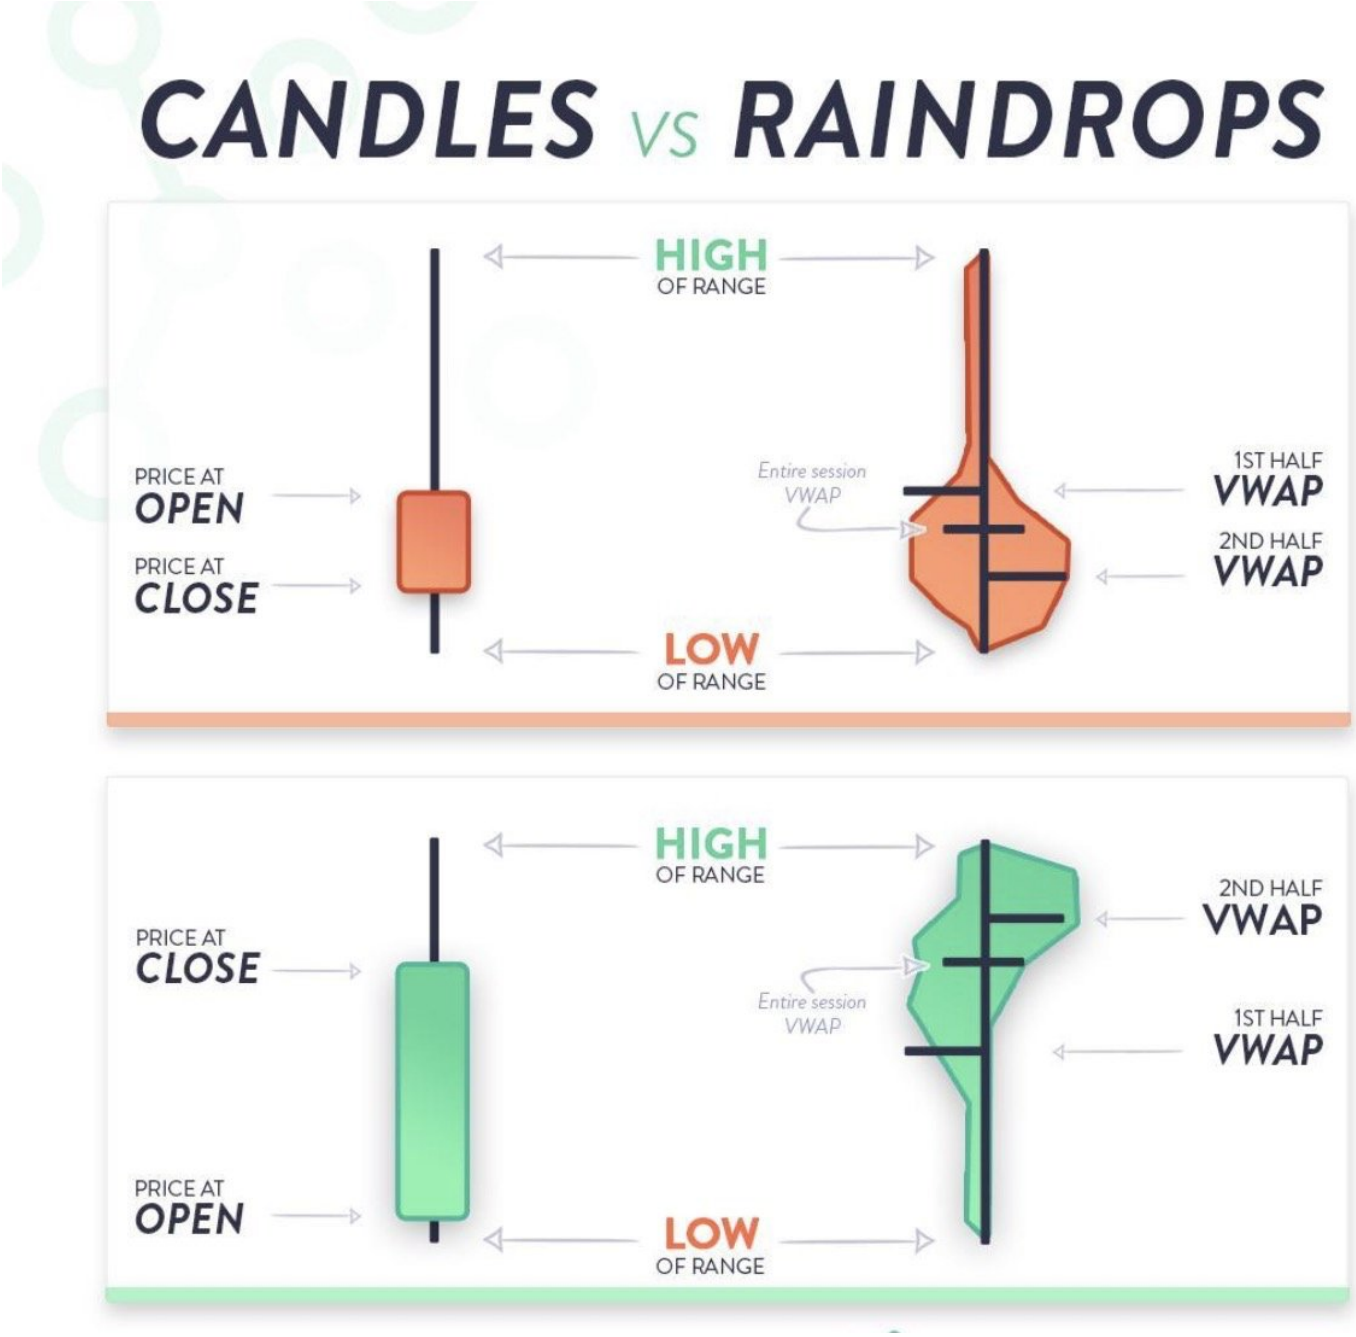

4/ Raindrops

Raindrop Charts are designed to let you see what’s happening in the market by visualizing price & volume together.

Providing a clear snapshot of supply and demand.

They offer huge insight as to where other traders are buying ■& selling ■.

ONLY on @TrendSpider

5/ Anchored VWAP

Developed by @alphatrends, this is one of my favorite on-chart tools. It was very exciting when it first came out. You can now auto-anchor on a number of candles. My favorites are the year to date (YTD), gap, swing high & swing low.

You've made it to the end. ■
