EXCERCISE, showing how Discount Rates impact Valuation, using \$NFLX as an example.

Why?

"Interest rates are to asset prices what gravity is to the apple. When there are low interest rates, there is a very low gravitational pull on asset prices"

--- Warren Buffett

The Futures curve is pricing in 8 Interest rate increases, or +210bp that the ANALYTS at Investment Banks have NOT yet adjusted for in Models

Investment Banks typically use the 10yr Bond, + Equity risk Premium + Beta Adjustment to arrive at a Discount Rate

This is why there is always a focus on the 10 Yr Bond, as Equities are priced to Bonds & the cashflow they can generate

Now you can see how sensitive valuations can be to changes in Interest Rates. The Bond Market is pricing in rises, YET Analysts at Investments Banks have not
