I'm certain I missed stuff, so if you're reading this and have something to share, or know of something I missed or someone to tag, please add it below.

Obvious big miss on my end - this thread by @BrantlyMillegan on Login with Ethereum
https://t.co/YVWt8m7sht

The Ethereum community has accidentally solved a major problem of the Internet: Single Sign-On

"Sign-In w/ Ethereum" is the future of login for *every app on the Internet*, crypto-related or not

Not just an idea, it's already the norm for web3 & will spread
