How to get started in web3 ■■

I didn't know what web3 was 7 months ago. Recently I completed the #100daysofweb3 challenge!

■ Here you go, my web3 roadmap for anyone getting started:

1/4 Start by doing

Start by learning and using the tools in the web3/crypto space ■

Do anything related to crypto but DO it. Don't just listen to a podcast or read a blog post.

- setup a crypto wallet eg: @MetaMask @phantom
- Interact with dApps: exchange some tokens, get an ens name etc.

■■ Checkout @rabbithole_gg, a dApp to onboard users to web3. It has some challenges for you to get started in the web3 world

2/4 Read, Research, Repeat

There is so much to learn and too many myths! Make sure to spend some time and do your own research.

Here are some resources to get you started:

- Look into the blockchains and protocols websites to get more information. Check out the white papers
- @useWeb3 by @wslyvh has a curated list of awesome resources
- @BanklessHQ and @rabbithole_gg Podcasts
- @gaby_goldberg's web3 reading list

(for Devs) 3/4 Building

Now that you have a basic understanding of the web3 space, it's time to start building.

■ Here are communities and builders that have guided me; my journey would not have been possible w/o the people here:

Some tips:

- Take it slow; there are many technologies to learn, and it's all brand new. It can get overwhelming very quickly
- Focus on a specific area (eg: frontend)
- Document your progress (can't overstate how many times I went back to my own content to remember)

- Start shipping! Don't wait for perfect. Upload your projects to GitHub, start a blog, create videos anything you're interested in
- Go beyond the tutorial and add some creativity ■■■
- Try out the #100daysofcode challenge (ps: i'd highly encourage to take breaks on the way)

4/4 Get involved

Join a DAO, be active on Twitter, reach out to people

- Find and learn about DAO's on @DAOCentral
- Come and join @developer_dao - membership applications will be opening up soon

If you love what you're doing, there are many employment opportunities.

Here is a great article by @Haezurath on this topic ■https://t.co/FmErkCmYFg

Checkout how you can contribute to DAO's. There are many ways to contribute from writing, developing, operations etc.

Additionally you can follow the projects and people on Twitter, create a post/project and reach out! In the web3 world, Twitter is the new Linkedin■

■ There you go, hope this helps!

If you'd like to read more about my journey and recommendations, check out my 100days article■
