JavaScript concepts you need to know before getting into React■■

■Arrow Functions:
An arrow function expression is a compact alternative to a traditional function expression.

https://t.co/YX7Lgka6F8

■Let/var/const variables:
Understand the difference between them, uses and their respective scopes.

https://t.co/FGRUENTak3

■Destructuring assignment:
Javascript expression that makes it possible to unpack values from arrays, or properties from objects, into a bunch of variables.

https://t.co/49N9ReMz0e

■ Template Literals:
With ES6, a newer form of string called template literal was given, which consists of two backticks ` `.

https://t.co/KmidEiacnB

■Async Js, Promise, Callback:
Such topics have been given in this thread, checkout.

■Using Fetch:
The Fetch API provides a JavaScript interface for accessing and manipulating parts of the HTTP pipeline, such as requests and responses.

https://t.co/DD3ZFh2CWD

■Import / Export:
ES6 gave people ability to share code between their own JavaScript files as well as third-party libraries using ES modules.
